Summary

- ◆ Stainless steel vertical exhaust system including 15" x 10" oval silencer and 114mm OD stainless steel pipe work. Black epoxy coated mild steel support post, tie bar and brackets. Exhaust kit includes all required pipe clamps, brackets, fasteners, fitting instructions and can be supplied separately from other customisation products if required
- ◆ Relocated battery box and air tank kit - required to create room for either long range fuel tank or power take off equipment (available separately for use with power take off equipment).
- ◆ SAG OE quality, robot welded aluminium construction fuel tank kit, providing an additional 560 litre fuel capacity. Kit complete with aluminium mounting supports, straps, balance line pipe work, valving and fittings
- ◆ Astra custom designed catwalk kit. Includes replacement, increased area catwalk with mountings, battery box cover and hinged access catwalk panel to battery box

Configurations:

The customisation kit can be supplied in several configurations (as indicated below)

ARN6001

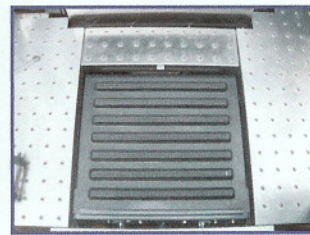

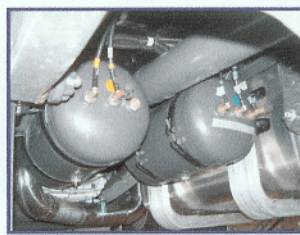

The ARN6001 customisation kit from Astra is supplied in kit form with full fitting instructions, or if required, vehicles can be routed via our installation centre in Ellesmere Port. The installation of an additional long range fuel tank to the offside position, requires relocation of the battery box, exhaust system and air tanks. The catwalk kit is an option to the ARN6001 customisation kit.

BATRN6001

The battery box and air tank relocation kit is available separately for application with other equipment such as power take offs / blowers.

SRN6001

Replacement stainless steel exhaust system configured for a single vertical outlet. The SRN6001 Astra exhaust system is available separately from the full customisation package and comprises silencer and pipe work from the turbo to the tail pipe in 304 specification fabricated stainless steel construction. All pipe work is fully supported with appropriate brackets, clamps and zinc plated fasteners and where necessary heat shielded in stainless steel. A rugged adaptor support plate and post mounting system is provided with tie bar assembly in epoxy coated mild steel. The mounting system is of rugged yet compact design making the system suitable for heavy duty applications without the need for longitudinal cross bracing. Thus the exhaust design minimises the use of space required for other chassis mounted accessories.
